## CS8582

## OBJECT ORIENTED ANALYSIS AND DESIGN LABORATORY

## **OBJECTIVES:**

- To capture the requirements specification for an intended software system
- To draw the UML diagrams for the given specification
- To map the design properly to code
- To test the software system thoroughly for all scenarios
- To improve the design by applying appropriate design patterns.

Draw standard UML diagrams using an UML modeling tool for a given case study and map design to code and implement a 3 layered architecture. Test the developed code and validate whether the SRS is satisfied.

- 1. Identify a software system that needs to be developed.
- 2. Document the Software Requirements Specification (SRS) for the identified system.
- 3. Identify use cases and develop the Use Case model.
- 4. Identify the conceptual classes and develop a Domain Model and also derive a Class Diagram from that.
- 5. Using the identified scenarios, find the interaction between objects and represent them using UML Sequence and Collaboration Diagrams
- 6. Draw relevant State Chart and Activity Diagrams for the same system.
- 7. Implement the system as per the detailed design
- 8. Test the software system for all the scenarios identified as per the usecase diagram
- 9. Improve the reusability and maintainability of the software system by applying appropriate design patterns.
- 10. Implement the modified system and test it for various scenarios
